

Bolt Seal

Locktainer 2000 SHC (blue)

The high-security bolt seal Locktainer 2000 SHC secures containers, truck trailers, and railcars. Designed for tight spaces, it features a slightly bent bolt. Standard marking and customizations are available. Removal requires a bolt cutter. Durable and tamper-resistant.

DESCRIPTION

These high security bolt seals are used to secure sea containers, box trucks, rail wagons and other transport containers.

The Locktainer 2000 SHC is the variant for tight spaces at the closure of the transport container. The bolt is slightly bent for easier attachment to the sealing openings and has no plastic coating. To close, the bolt is pressed into the body until it clicks into place.

The Locktainer 2000 SHC has a field protected by a transparent plastic cover, on which, in addition to the standard identification with a letter and a 6-digit number, an customisation with your own barcode, a special number sequence, a logo or a text of max .16 characters are possible (see tab "Customisation"). An range of colours for the seal can also be requested.

The Locktainer 2000 SHC can only be removed with a bolt cutter.
